Exquisitely Elegant Family Home

This brand-new elegant house sits within a private gated estate in the historic town of Beaconsfield. The owner of this beautiful residence, wanted a fully integrated solution that fitted in with the interior designed rooms, yet provided the convenience and flexibility of a fully automated system. Having easy control over this media rich house was a priority.

The brief included the installation of a media room, multi-room audio and HDMI video distribution, intelligent lighting control, automated window shading, CCTV system with remote access from smartphones, network distribution and heating control.

Smartcomm needed to maintain the integrity of the interior design while adding the luxury of cutting edge technology. The project was managed on time, on budget, with a minimum of disruption and to the client's delight.

Elegance and Efficiency

Smartcomm designed the system to have all the audio, visual and network sources distributed from a single central location throughout the property. This provides our client with the ability to access all content, in any room, from a single remote control. Apple iPads are programmed to control the Audio, Visual, lighting, shading and heating from the downloaded Crestron control app.

Programmed Lutron Palladiom keypads make adjusting the lighting easy throughout the house.

Awesome Media Room

The media room is both a place to enjoy movies as a family and for the teenage boys to do some serious gaming, in sumptuous comfort.

While the system is great for a general day-to-day TV experience with simple controls for channel surfing, the sports viewing experience packs a punch and the gaming experience captures you in the virtual reality.

The Artcoustic Multi-SL Soundbar was bespoke width and matched to the LG 75" HDR 4K LED TV, which was mounted on an articulated pull-out swivel mount. Artcoustic Target SL speakers in a matt black finish seamlessly blend into the interiors with the artcoustic impact 1 subwoofer perfectly poised on its wall mount. Press 'movie' and the lights dim, the automated blinds descend, 4K HD TV comes on and the Blu Ray engages ready for the Artcoustic audio impact.

Rack and Roll

The AV equipment rack is placed in a discrete cupboard which helps protect equipment, by keeping it in a more controlled environment.

A Sky HD Receiver, Apple TV and a Crestron 6 zone multi-room Audio Amplifier with a Sonos Audio streaming device, allows the music, TV, Dab radio to be synched throughout the whole house or enjoyed individually.

The heart of the system is the Crestron 6x6 Digital Media matrix. This controls and distributes all the various AV sources throughout the house.

Fabulous Family Audio Visual

In the open plan kitchen, dining and family area the 55" 4K UHD Smart LG LED TV is on a pull out, swivel, wall mounted bracket. Perfect for such a large space, as the screen can be moved to the best position for viewing.

Flush KEF in-ceiling speakers provide multi-zonal audio for the kitchen, lounge and bedrooms. The open plan kitchen-living space has a Sonos playbar and wireless Sonos subwoofer.
